

MEDICATION LIST

Please avoid Aspirin and other non-steroidal anti-inflammatory drugs such as Motrin and Aleve, as these can cause excessive bleeding.

If you are on anticoagulants/blood thinner such as Coumadin (Warfarin) and Plavix (Clopidogrel) you must inform the performing surgeon.

In addition to Aspirin-like medications, Vitamin E and many herbal supplements need to be stopped such as Garlic, Ginkgo, Ginseng, Flaxseed, Ginger, Feverfew, Bilberry, Chamomile, and Selenium.

You can take Tylenol (acetaminophen) for pain relief.

The following medications need to be stopped 10 days prior until 5 days after surgery. Shoulder patients should not restart the medications until 6 weeks after surgery. The pre-admissions nurse will review your medications with you and tell you which ones to take the morning of surgery and which ones to avoid until after surgery.

Advil	Darvon	Lanorinal	Pietal
Aggrenox	Daypro	Lioresal	Piroxicam
Aleve	Diclofenac	Lodine	Ponstel
Alka-Seltzers	Diflunisal	Magan	Relafen
Anacin	Di-agesic	Magsal	Robaxisal
